Introduction Assignment Project Exam Help

In this assignment you will be writing an agent to play the game of Nine-Board Tic-Tac-Toe. This game is played on a 3 x 3 array of 3 x 3 Tic-Tac-Toe boards. The first move is made by placing an X in a randomly chosen cell of a randomly chosen board. After that, the two players take turns placing an O or X alternately into an empty cell of the board corresponding to the deli of the previous move. (For example, if the previous move was into the upper right corner of a board, the next move must be made into the upper right board.)

The game is won by getting three-in-a row either horizontally, vertically or diagonally in one of the nine boards. If a player is unable to make their move (because the relevant board is already full) the game ends in a draw.

Getting Started

Copy the archive src.zip into your own filespace and unzip it. Then
type

cd src make all

程序代写代做 CS编程辅导

You should then see something like this:

```
WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com
```

next move for \mathbf{QQ} : 749389476

You can now play Nine-Board Tic-Tac-Toe against yourself, by typing a number for each move. The cells in each board are numbered 1, 2, 3, 4, 5, 6, 7, 8, 9 as follows:

+----+ |1 2 3| |4 5 6| |7 8 9|

To play against a computer player, you need to open another terminal window (and cd to the src directory).

Type this into the first window:

./servt -p 12345 -x

程序代写代做 CS编程辅导

This tells the server to use port 12345 for communication, and that the moves for X by you, the human, typing at the keyboard. (If port you should then type second window (using the same port number):

The program ranks singulation to Paraject with available legal moves. The Python program agent py behaves in exactly the same way Yaw catuptay accord to the second window:

python3 agent
$$00:749389476$$

https://tutorcs.com

You can play against a somewhat more sophisticated player by typing this into the second window:

(If you are using a Mac, type _/lookt_mac instead of _/lookt)

Writing a Player

Your task is to write a program to play the game of nine-board tic-tactoe as well as you can. Your program will receive commands from the server (init, start(), second_move(), third_move(), last_move(), win(), loss(), draw(), end()) and must send back a single digit specifying the chosen move.

(the parameters for these commands are explained in the comments of agent.py)

Communication be 经序样 医水式 微 the 多编样。 精神 this brief example:

Pla District	Server		<u>Player O</u>	

Tutor CS	init	\rightarrow		
	(×)			
	start(o)	\rightarrow		
WeCh	næt: restatores	$s \rightarrow$		
			6	
Assig	nment/Proje	ct	Exam	i Help
9 >				
Email	: tutores@d	63	.com	
	40004	\leftarrow	6	
QQ:←/	49389476			
5 →				
https:/	//tutorcs.con	\mathbf{l}		
←	win(triple)			
	loss(triple)	\rightarrow		
←	end			
	end	\rightarrow		

Language Options

You are free to write your player in any language you wish.

1. If you write in Python, you should submit your .py files (including agent.py); your program will be invoked by:

python3 agent.py -p (port)

2. If you write in Java, you should submit your .java files (no .class files). The main file must be called Agent.java; your program will be invoked程:序代写代做 CS编程辅导

java Agent <u>-n (nort)</u>

3. If you write in should submit your source files (no object files) as cefile which, when invoked with the command "make", will produce an executable called agent; your program will be invoked by: cstutorcs

./agent -p (port)

Assignment Project Exam Help

If you wish to write in some other language, let us know. Email: tutorcs@163.com

Starter Code

QQ: 749389476

Two types of starter code are provided. The src directory contains a minimally function in the socket and plays random moves (agent.py, Agent.java, agent.c). The directory code/ttt contains a standalone program in each language which plays normal (single board) tic-tac-toe and chooses its moves via alpha-beta search (ttt.py, ttt.java, ttt.c).

Note: You are free to use some method other than alpha-beta search if you wish. The starter code is simply meant to provide you with one viable option.

Testing Your Code

To play two computer programs against each other, you may need to open three windows. For example, to play agent against lookt using port 54321, type as follows:

window 1: ./servt -p 54321

/agent -p. 54321 程緣代-55线數 CS编程辅导 window 2:

window 3:

(Whichever progra **∄**irst will play X; the other program will play O.)

You can alternative **T**ell script playt.sh, and provide the executables and port number as command-line arguments. Here are some examples:

WeChat: cstutorcs

- ./playt.sh ./agent ./lookt 12345
- ./playt.sh "javasagent" ent Project Exam Help
 ./playt.sh "pythons agent.py" ./lookt 12347

Email: tutorcs@163.com

The strength of lookt can be adjusted by specifying a maximum search depth (defaul Qalue 459378224 nable range is 1 to 18), e.g.

./playt.sh "python3 agent.py" "./lookt -d 6" 31415 https://tutorcs.com

Question

At the top of your code, in a block of comments, you must provide a brief answer (one or two paragraphs) to this Question:

Briefly describe how your program works, including any algorithms and data structures employed, and explain any design decisions you made along the way.

Groups

This assignment may be done individually, or in groups of two students. Groups are determined by an SMS field called pair3. Every student

has initially been assigned a unique pair3 which is "h" followed by their student ID number, e.g. h1234567.

- 程序代写代做 CS编程辅导

 1. If you plan to complete the assignment individually, you don't need to do anything that if you do create a group with only you as a member, that
- 2. If you wish to the webCMS page and click on "Group Type" and select "pair". After creating a group, click "Edit", search for the other member, and click "Add". WebCMS assigns a unique group in the form of "g" followed by six digits (e.g. g012345). We will periodically run a script to foatiles manual introject Exam Help

Submission Email: tutorcs@163.com

You should submit by typing 19389476 give cs3411 hw3 ...

Remember to including the one with the answer to the Question).

You can submit as many times as you like – later submissions will overwrite earlier ones. You can check that your submission has been received by using the following command:

3411 classrun -check

The submission deadline is Friday 19 April, 10 pm.

5% penalty will be applied to the mark for every 24 hours late after the deadline, up to a maximum of 5 days (in accordance with UNSW policy).

Additional information may be found in the FAQ and will be considered as part of the specification for the project.

Questions relating to the project can also be posted to the Forum on WebCMS.

If you have a question that has not already been answered on the FAQ or the Forum, you can email it to cs3411@cse.unsw.edu.au

Marking scheme

• 10 marks for peace an ainst a number of pre-defined opponents.

• 6 marks for Alcarda and answer to the Question

You should always adhere to good coding practices and style. In general, a program that attempts a substantial part of the job but does that part correctly will receive marks I han one attempting to do the entire job but with many errors.

Email: tutorcs@163.com

Plagiarism Policy OO: 749389476

Your program must be entirely your own work. In addition, soliciting another person (or person (or person) to the Internet – is never permitted. Generally, the copying of code already available on the Internet is also forbidden. If you find some piece of "standard" code in a textbook, or on the Internet, which you would like to adapt and incorporate into your own assignment, you must email the lecturer in charge to ask if it is permissible to do so in the particular circumstances – in which case the source would have to be acknowledged in your submission, and you would need to demonstrate that you had done a substantial amount of work for the assignment yourself. Plagiarism detection software will be used to compare all submissions pairwise and serious penalties will be applied, particularly in the case of repeat offences.

DO NOT COPY FROM OTHERS; DO NOT ALLOW ANYONE TO SEE YOUR CODE

Please refer to the UNSW Policy on Academic Integrity and Plagiarism if you require further clarification on this matter.

Good luck! 程序代写代做 CS编程辅导
